Subject: **West Harris County Regional Water Authority (WHCRWA)
Surface Water Delivery from WHCRWA**

Dear Sir or Madam,

Recently, the West Harris County Regional Water Authority (WHCRWA) has experienced low water levels in their ground storage tank at peak usage times and has been forced to reduce the rate of flow to some districts. Please be advised that over the next 3 to 5 months the rate of flow of surface water may be reduced and the District should make sure their well(s) are operational and controls are set to turn the wells on if the WHCRWA must decrease the delivery rate to the District.

The WHCRWA continues to connect additional districts to the surface water supply system to meet the 2010 HGSD mandates and has a limited supply of surface water from the City of Houston until the next Raw Water Capital Cost payment to the City is made later this year. This, along with the dry weather, is creating a high demand at peak times.

The Authority will attempt to provide those districts that do not have a good operational well and/or have water quality issues such as radon or arsenic surface water at the current rate of flow, if possible. Any districts having well problems or wells out of service for repairs or maintenance should report that to Mr. Scott Barr at SouthWest Water Company (713-907-6056) so that the Authority can attempt to also provide those districts surface water at the current rate of flow, if possible.

Your cooperation during this start-up process is appreciated and if there are any issues or you have any questions, please contact Mr. Wayne G. Ahrens, P.E. at 713-527-6378.

Sincerely yours,

Wayne G. Ahrens, P.E.
Program Manager
